SUMMARY

AI Engineer and founder shipping LLM-powered products into regulated B2B workflows. Currently building and selling CrossCode, an AI HTS classification platform piloting with SF Bay Area customs brokers. Prior production experience integrating autonomous AI agents into early-stage MVPs. Comfortable across the full stack — RAG, agent orchestration, eval harnesses, and the Next.js/Postgres surfaces that ship them.

EXPERIENCE

Founder & AI Engineer — CrossCode, San Francisco, CA

Sep 2025 – Present

AI HTS classification platform for licensed customs brokers

- Designed and shipped a **retrieval-augmented LLM classification engine** that maps free-text product descriptions to 10-digit HTS codes in under 3 seconds, compressing 10–15 minute manual lookups into a single query for licensed brokers.
- Built the **RAG pipeline** over the full Harmonized Tariff Schedule (19,000+ codes) using pgvector embeddings and constrained decoding to suppress hallucinated codes; designed an evaluation harness with broker-graded ground truth.
- Architected the **broker-in-the-loop correction workflow** — every override is re-indexed into the retrieval layer so accuracy compounds with usage.
- Running paid pilots with SF/Bay Area brokerages (CBFANC ecosystem); owning product, sales, and infrastructure end-to-end. **Stack:** Python, FastAPI, OpenAI + Anthropic APIs, pgvector/Postgres, Next.js, Vercel.

AI Engineer Intern — LOOK, New York, NY

Jun 2025 – Aug 2025

- Independently architected and shipped a **multi-step AI agent** into LOOK's production MVP — the first AI capability in the product and the integration pattern the team extended for downstream features.
- Designed the agent's **tool-use schema, prompt chain, and fallback logic**, integrating lovable.dev tooling with custom orchestration so the agent could autonomously complete core user tasks without human intervention.
- Owned end-to-end delivery — prompt engineering, observability, and iterative eval cycles; the system was formally designated proprietary IP by the company.
- Led 12+ pairing sessions across the intern team and resolved 7 production-blocking bugs, materially accelerating the MVP timeline.

Full-Stack Developer Intern — Think Round Inc., San Francisco, CA

Nov 2023 – Jul 2024

- Designed and shipped WCAG-compliant, responsive web interfaces serving 5,000+ users across a nonprofit arts initiative.
- Led a 15-person developer team across 3 concurrent web projects; owned task tracking, code review, and deployment workflows.

Software Engineer Intern — Wings-Within, San Francisco, CA

Jun 2023 – Nov 2023

- Built full-stack features (React, Node.js, MongoDB) supporting internal operations; redesigned the mobile landing page and lifted conversion 30%.

PROJECTS

Signal — Agentic VC Intelligence Pipeline

github.com/LaxRaj/Signal

- Built an autonomous research agent that scrapes, deduplicates, and entity-extracts startup news across TechCrunch and peer sources — compressing hours of analyst sourcing into a 5-minute morning briefing.
- Engineered a modular Python ingestion pipeline using spaCy for NER and company resolution over unstructured text; production-grade error handling and retry logic.

Other: Atlas — quantitative personal finance engine in Python (Modern Portfolio Theory + tax-loss harvesting under IRS wash-sale constraints). github.com/LaxRaj/project-atlas

TECHNICAL SKILLS

AI / ML: OpenAI API, Anthropic API, RAG, embeddings, pgvector, prompt engineering, agent orchestration, tool-use schemas, eval harnesses, LLM observability, spaCy, scikit-learn

Languages: Python, TypeScript, Java, OCaml

Frameworks & Infra: Next.js, React, React Native, FastAPI, Express.js, Redux, Jest, Postgres, MongoDB, DynamoDB, Vercel, REST APIs, Git/GitHub, CI/CD

EDUCATION

B.S. Computer Science — San Francisco State University

Expected May 2026

Coursework: Data Structures & Algorithms, Operating Systems, Probability & Statistics with Computing, Programming Methodology (C++), Machine Structures.

Finance & Quant Modeling for Analysts — University of Pennsylvania (Coursera)

Jul 2025

LEADERSHIP

VP, Professional Development, Muslim Tech Collaborative (Aug 2024 – Present) | **Vice-President**, Tennis Club, SFSU (Aug 2025 – Present)

| **Organizer & Web-Master**, SF Hacks – sfhacks.io (Aug 2023 – May 2024)
